COMMUNITY ENGAGEMENT WITH COMMUNITY FORESTS UNDER DIFFERENT OWNERSHIP MODELS IN THE U.S.

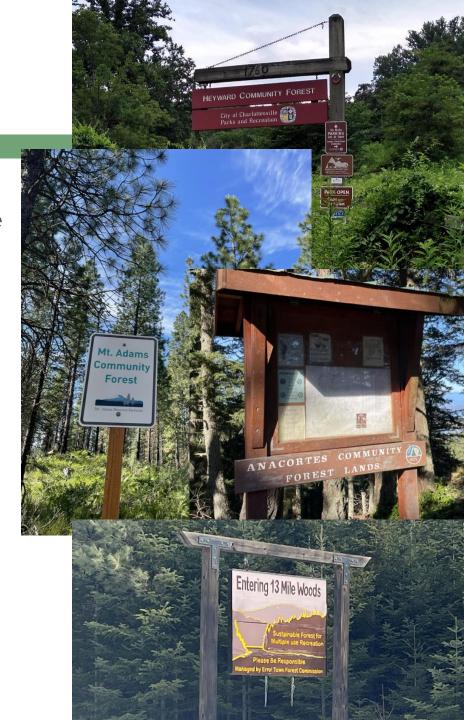

Kathleen McGinley

USDA Forest Service

International Institute of Tropical Forestry

Background

- Community Forests (CF) have long been established, and more recently are expanding, in many parts of the US
- Range of ownership models, tenure regimes, governance approaches, aims, and activities
- Incomplete understanding of range in CF characteristics; how different CF models shape community rights, roles, and responsibilities, and outcomes in forest conservation and rural prosperity

Collaborative Research on CFs in the US

- FS/NCSU/OSU Collaborative Research on 'Community Forests as an Innovative Approach to Promoting Rural Prosperity in the US'
 - Co-Pls: Susan Charnley (USFS PNW), Frederick W. Cubbage (NCSU), Gregory E.
 Frey (USFS SRS) (Pl), Reem Hajjar (OSU), Kathleen McGinley (USFS IITF)
 - Affiliate Researcher: John Schelhas (USFS SRS ret.)
 - RAs/Students: Meredith Hovis (UNC-W), Kailey Kornhouser (OSU), Lauren McCaskill (OSU), Emma Sloan (OSU), Nathan Tarr (NCSU)
- Aim: Advance knowledge on CFs in the US and provide policy and practical insights for their establishment and support as an innovative approach to maximize forest conservation and rural prosperity
- Methods: survey research, case studies, in-depth social-economic analyses

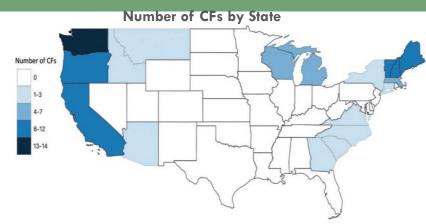

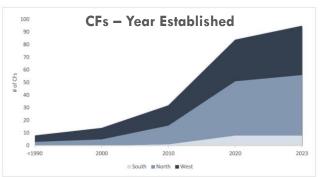

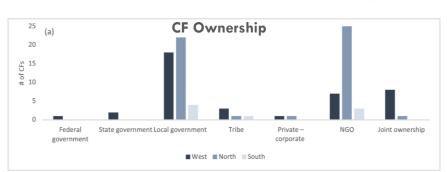

Characterizing CFs in the US (Hajjar et al. 2024)

- Survey of 98 CFs in the US
- Earliest est. in 1930s, most est. since 2010
- Total area: 436,411ac; 63% < 1,000 ac; 13% >5,000 ac
- Ownership: primarily local govt and NGO owned; fewer tribe-, state-, fed- owned CFs
- Decision making authority –
 generally corresponds to ownership
 type; most utilize various means for
 soliciting input, engaging cmty, and
 sharing decision-making authority

CF Ownership, Rights, and Responsibilities

- Common pool resources, property rights theories: Incentives to sustain and protect land and resources can differ according to the combination of rights and responsibilities possessed
- How do CF different
 ownership models and
 associated bundles of
 community rights shape
 community engagement in and
 responsibilities for forest
 governance, mgmt., and
 outcomes

Level of Rights/Title	Owner	Proprietor	Claimant	Authorize d user	Entrant/ viewer
Access: right to enter a defined physical area and enjoy non-subtractive benefits	√	✓	√	✓	✓
Withdrawal: right to obtain resource units or products	✓	✓	✓	✓	
Management: right to regulate internal use patterns and transform the resource	✓	√	✓		
Exclusion: right to determine who has access and how it may be transferred	✓	✓			
Alienation/Sale: right to sell or lease rights of exclusion, management, withdrawal	√		Schla	aer and Ostr	om 1992

Community Rights, Responsibilities, Engagement Under Different CF Ownership Models in the US

Outputs/Outcomes

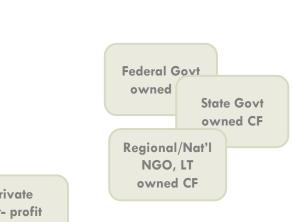

e.g., retention, products, services

Implementation

e.g., multi-use mgmt., best practices

Input/Involvement

e.g., planning, decisions

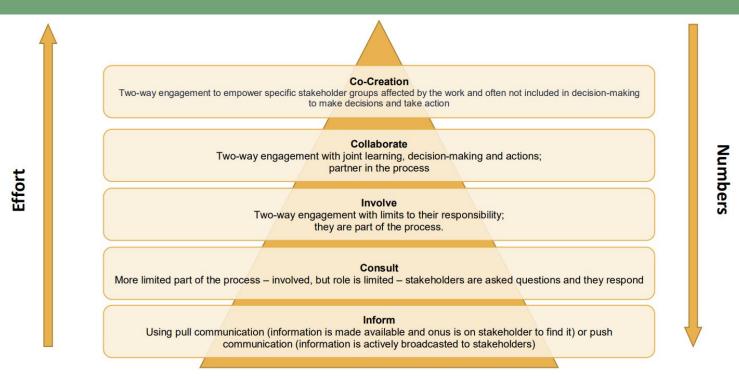

Tribal Govt Local Govt owned CF owned CF NGO, CBO, LT owned CF

Private For- profit CF

COMMUNITY PROPERTY RIGHTS

Withdrawal Management Exclusion Sale Access

CF – Public Participation and Engagement

Source: IAPP 2018

Diverse approaches for engaging community members and enabling their participation in decisions, their implementation, and their outcomes

Range from informing through co-creation/empowerment and with regards to the effort invested and number/portion of community members engaged/involved

CF – Public Participation and Engagement

Level of Participation	Types of Engagement	
Inform	Factsheets, Kiosks, Websites, Open Houses	
Consult	Public comment, Focus groups, Surveys, Public Meetings	
Involve	Workshops, Deliberate polling, Field Work, Forest Monitoring	
Collaborate	Citizen Advisory Committees; Consensus-building; Participatory decision-making, Stewardship Committees, Citizen Science	
Co-create/Empower	Ballots; Citizen Juries; Co-production of projects/plans; Delegating decisions and their implementation	

Closing Remarks

- CFs in US typically involve enhanced collaborative,
 participatory decision processes and increased rights for local community
- Ownership models often reflect balance b/w desired community rights to local forests and community capacity to assume responsibilities and authority
- CFs utilize broad range in approaches for engaging community members and facilitating their participation in decisions, their implementation, and their outcomes
- Enduring equitable community participation and engagement
 - Community capacity building
 - Community members and groups seen as partners rather than beneficiaries or obstacles
 - Creative/innovative mechanisms for stakeholders to articulate their knowledge, needs, and vision for the CF
